Total Orders	1,000
Sales	■534,142
Profit	■54,388
Profit Ratio	10.18%
Average Shipping Days	4 days

BUSINESS INSIGHTS

01 — SOUTH LEADS REVENUE, BUT EAST LEADS PROFITABILITY

South generates the highest regional sales at approximately ■**138,574**, while East generates approximately ■**14,733 profit**, the highest regional profit shown.

Why it matters: *The region generating the most revenue is not necessarily the region generating the most profit. Regional performance should therefore be evaluated using both sales and profitability.*

Management signal: Benchmark East's profitability drivers and South's revenue-generation practices separately rather than using sales alone as the regional success measure.

02 — WEST HAS THE LARGEST SALES-TARGET GAP

West records approximately ■**133,329** in sales against a target of approximately ■**176,485**, leaving a gap of about ■**43,156**.

Why it matters: *This is the clearest regional performance gap in the dashboard and warrants investigation into demand, product mix, customer segments, and execution.*

Management signal: Diagnose the West gap at category, sub-category, and customer-segment level before changing regional strategy.

03 — SOUTH IS CLOSEST TO ITS REGIONAL TARGET

South records approximately ■**138,574** in sales against a target of approximately ■**142,365**, achieving about **97.3%** of target.

Why it matters: *South combines the highest sales with the strongest target attainment among the four regions shown.*

Management signal: Use South as a benchmark for understanding the commercial practices supporting strong regional execution.

04 — TECHNOLOGY LEADS THE PORTFOLIO WITHOUT CREATING CATEGORY DEPENDENCY

Technology contributes approximately **35.03%** of total category sales, ahead of Furniture at **32.71%** and Office Supplies at **32.27%**.

Why it matters: *Technology is the leading category, but the relatively close category shares indicate that revenue remains diversified.*

Management signal: Continue growing Technology while maintaining the strength of Furniture and Office Supplies.

05 — TABLES ARE THE STRONGEST INDIVIDUAL PRODUCT

Tables generate approximately ■**69,607** in sales, followed by Paper at ■**67,446** and Accessories at ■**66,944**.

Why it matters: *Product-level performance identifies specific revenue anchors that are not visible from category totals alone.*

Management signal: Protect availability, merchandising, and promotional support for consistently high-performing products.

06 — CONSUMER IS THE CORE REVENUE SEGMENT

The Consumer segment contributes approximately ■**236,498** in sales, ahead of Home Office at ■**161,361** and Corporate at ■**136,283**.

Why it matters: *Consumer customers represent the largest revenue pool and therefore have significant influence on overall sales performance.*

Management signal: Prioritize Consumer demand patterns while identifying opportunities to grow the Corporate and Home Office segments.

07 — HIGH-VALUE CUSTOMERS CREATE A CLEAR RETENTION OPPORTUNITY

The leading customer contributes approximately ■**8,032** in sales, followed by customers contributing approximately ■**8,008** and ■**7,762**.

Why it matters: *These customers have demonstrated substantially higher individual value than the broader customer base.*

Management signal: Use differentiated retention and loyalty strategies for high-value accounts.

08 — EAST HAS THE LONGEST SHIPPING CYCLE

Average shipping time is approximately **4.04 days in East**, compared with **3.95 days in Central**, **3.86 days in South**, and **3.99 days in West**.

Why it matters: *East combines the highest profit with the longest shipping cycle, making operational efficiency an important area for improvement.*

Management signal: Review fulfillment and logistics processes in East without compromising the region's strong profitability.

09 — SALES SHOW CLEAR MONTHLY VOLATILITY

The sales trend shows notable peaks and declines across both years. In 2024, sales rise to approximately ■**31,726 in November** before falling sharply to approximately ■**855 in December**.

Why it matters: *Large month-to-month movements indicate that sales planning should account for timing and demand variability.*

Management signal: Align inventory, campaigns, and sales targets with the observed monthly demand pattern.

10 — HIGHER DISCOUNTS DO NOT GUARANTEE HIGHER PROFIT

The Sales vs Discount scatter plot shows that higher sales and discount levels do not translate consistently into higher profit.

Why it matters: *Discounting can support sales while simultaneously putting pressure on margins. Revenue growth should therefore be evaluated alongside profitability.*

Management signal: Establish discount discipline based on incremental profit rather than sales uplift alone.

MANAGEMENT VIEW

The dashboard points to a clear management story

Global Retail Pvt Ltd has a diversified sales portfolio, but regional performance reveals different strengths: **South leads revenue, East leads regional profit, and West has the largest target gap.** At the product level, Tables, Paper, and Accessories are important revenue anchors, while Consumer customers represent the largest segment contribution.

The analysis also highlights two operational priorities: **East has the longest average shipping cycle**, and the Sales vs Discount relationship indicates that additional discounting does not consistently create additional profit.

REGIONAL PRIORITY MATRIX

Area	Dashboard Signal	Management Focus
South	■138,574 sales; ~97.3% target	Benchmark & scale
East	■14,733 profit; 4.04 shipping days	Protect margin; improve logistics
West	■43,156 target gap	Diagnose performance gap
Technology	35.03% category sales	Grow strategically
Tables / Paper / Accessories	Top 3 products	Protect availability
Consumer	■236,498 sales	Retain & expand
High-value customers	Top customers ■7.8K–■8.0K+	Retention & loyalty
Discounting	Profit not consistently higher	Protect margin

FINAL CONCLUSION

The final dashboards show a business with **strong category diversification and distinct regional opportunities**. South is the revenue leader and is closest to its regional target, while East delivers the highest regional profit despite having the longest shipping cycle. West represents the largest target shortfall and therefore the clearest area for corrective analysis.

At the product and customer level, Tables, Paper, and Accessories are leading products, while Consumer is the largest revenue segment. High-value customers provide a clear retention opportunity. Finally, monthly sales volatility and the weak relationship between higher discounts and higher profit indicate that planning and pricing decisions should be based on both **growth and profitability**.

> **“Grow where demand is proven, learn from where profit is strongest, close the regional gaps, and protect margin while pursuing growth.”**
